v1.0 BRSD

Agent 360 Operational Blueprint

System Design and User Execution Workflows for the Next-Generation Enterprise Customer Service Platform.

The Agent 360 Capability Landscape

Zone 1: Access & Identity

1

Capabilities: Journey & Session Management (JSM), Agent Profile Management (APM).

Interacts with: Qnomy, DXP, Siebel

Zone 2: Awareness & Communications

2

Capabilities: Bell Icon Notification (BIN), Bulk Notes (BNT).

Interacts with: DXP, Siebel

Zone 3: Operations & Execution

3

Capabilities: Agent Task View (ATV), Agent Approval View (AAV).

Interacts with: DXP, Siebel, WFM (TBD)

Zone 4: Output Management

4

Capabilities: Agent Level Entity Export (AEX).

Interacts with: DXP, Siebel

Secure Journey Initiation

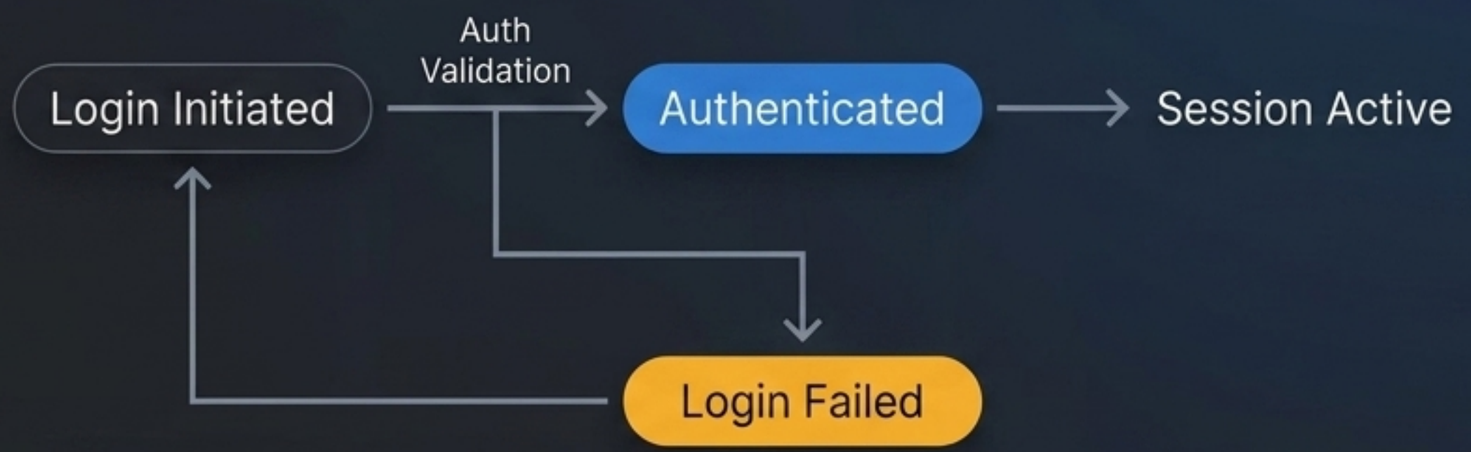

Capability: CAP-01 (Journey & Session Management)

Key Workflows

Automated tracking record creation, Qnomy queue integration, ticketing, milestone persistence, and draft order resume.

Data Entities

Draft Order, Tracking Record.

Role-Based Profile Governance

Capability: CAP-36 (Agent Profile Management)

Profile Widget

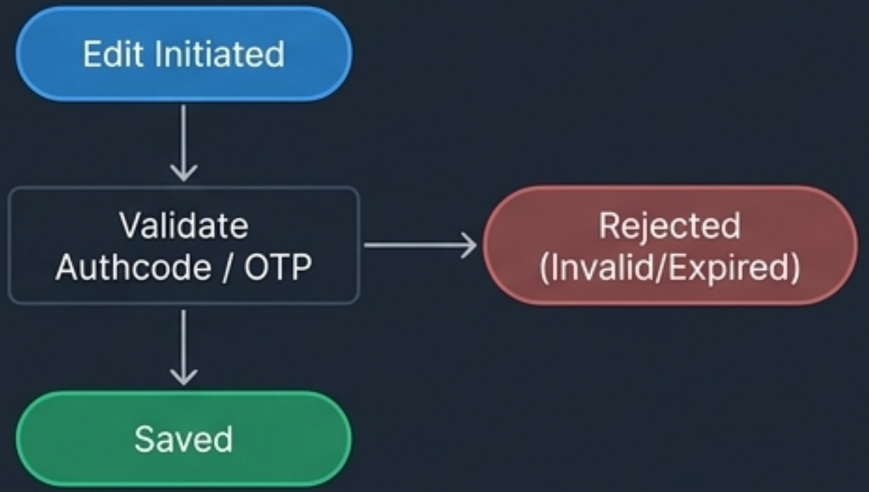

Language Preference — English / Arabic

MFA Authorization Status

Guardrail BR-01: Accountability

Only granted agents may update profiles; agents are accountable for submitted changes.

Workflow Diagram

Guardrail BR-02: MFA Authorization

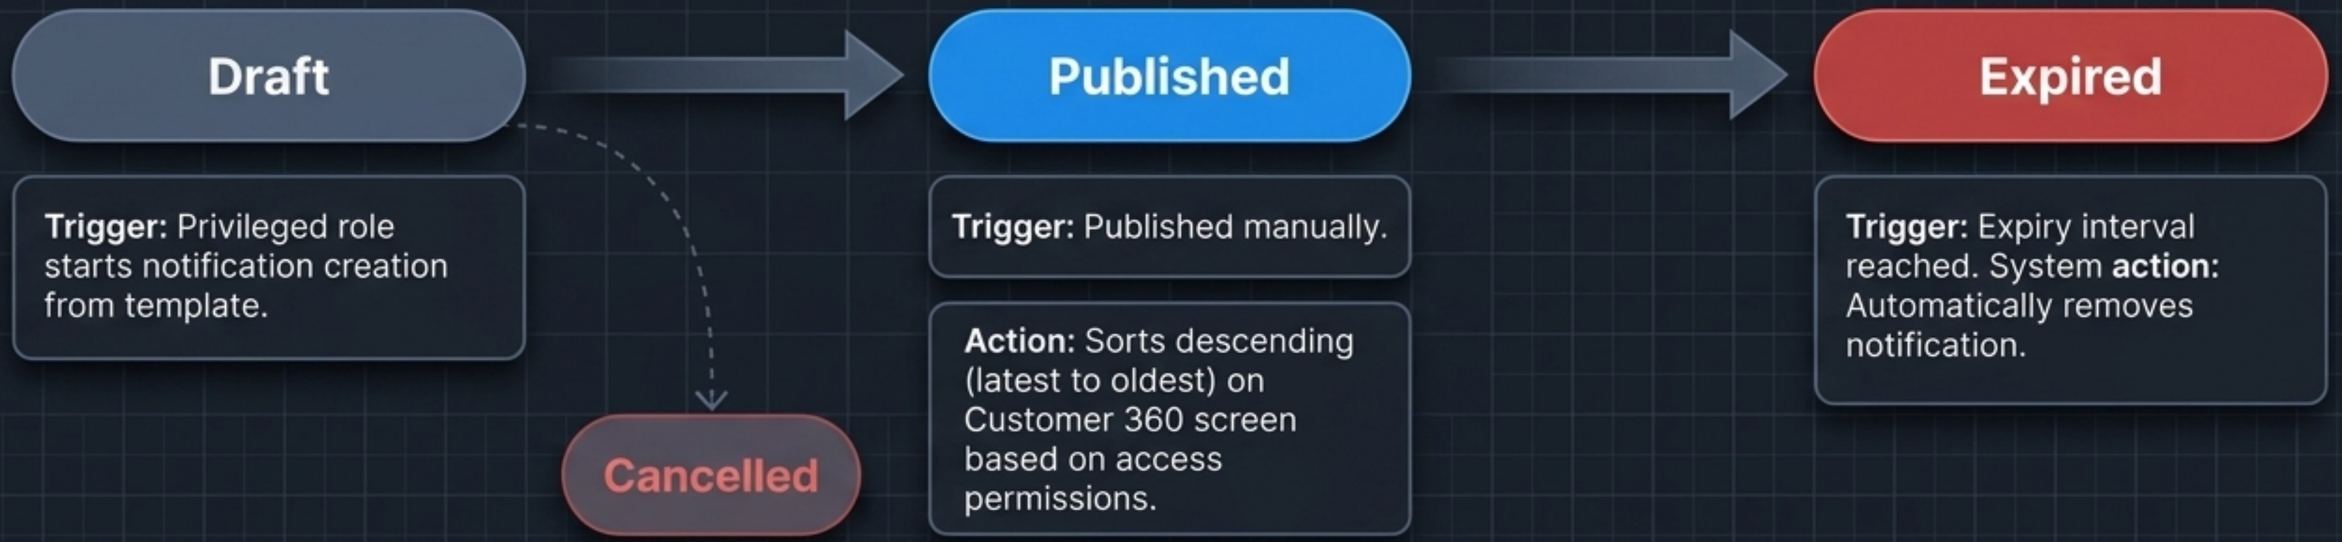

MFA changes require successful Authcode/OTP verification and must align with VFQ Security privileges.

Communication Mechanics: Targeted vs. System-Wide

	Bell Icon Notification (CAP-37)	Bulk Notes (CAP-38)
Trigger / Context	Applicable to specific customer accounts or MSISDNs.	Applicable to one or multiple customer accounts simultaneously.
Visibility	Displayed as a banner across Customer 360 screens.	Displayed with posting date/time system-wide.
Expiry Rules	Removed automatically after preconfigured interval (No manual expiry).	Maintained indefinitely regardless of timeline (unless overridden by business rule).

Guardrails BR-03 & BR-04: Both tools are strictly governed. Only designated Backoffice/privileged staff may configure/publish using approved templates.

The Bell Notification Lifecycle

WARNING: REQUIREMENT AGN-001-BIN-06

The agent cannot manually expire this alert.

Task Allocation and Execution Engine

Capability: CAP-39 (Agent Task View)

Supervisor View

Responsible for configuring priority categorizations.

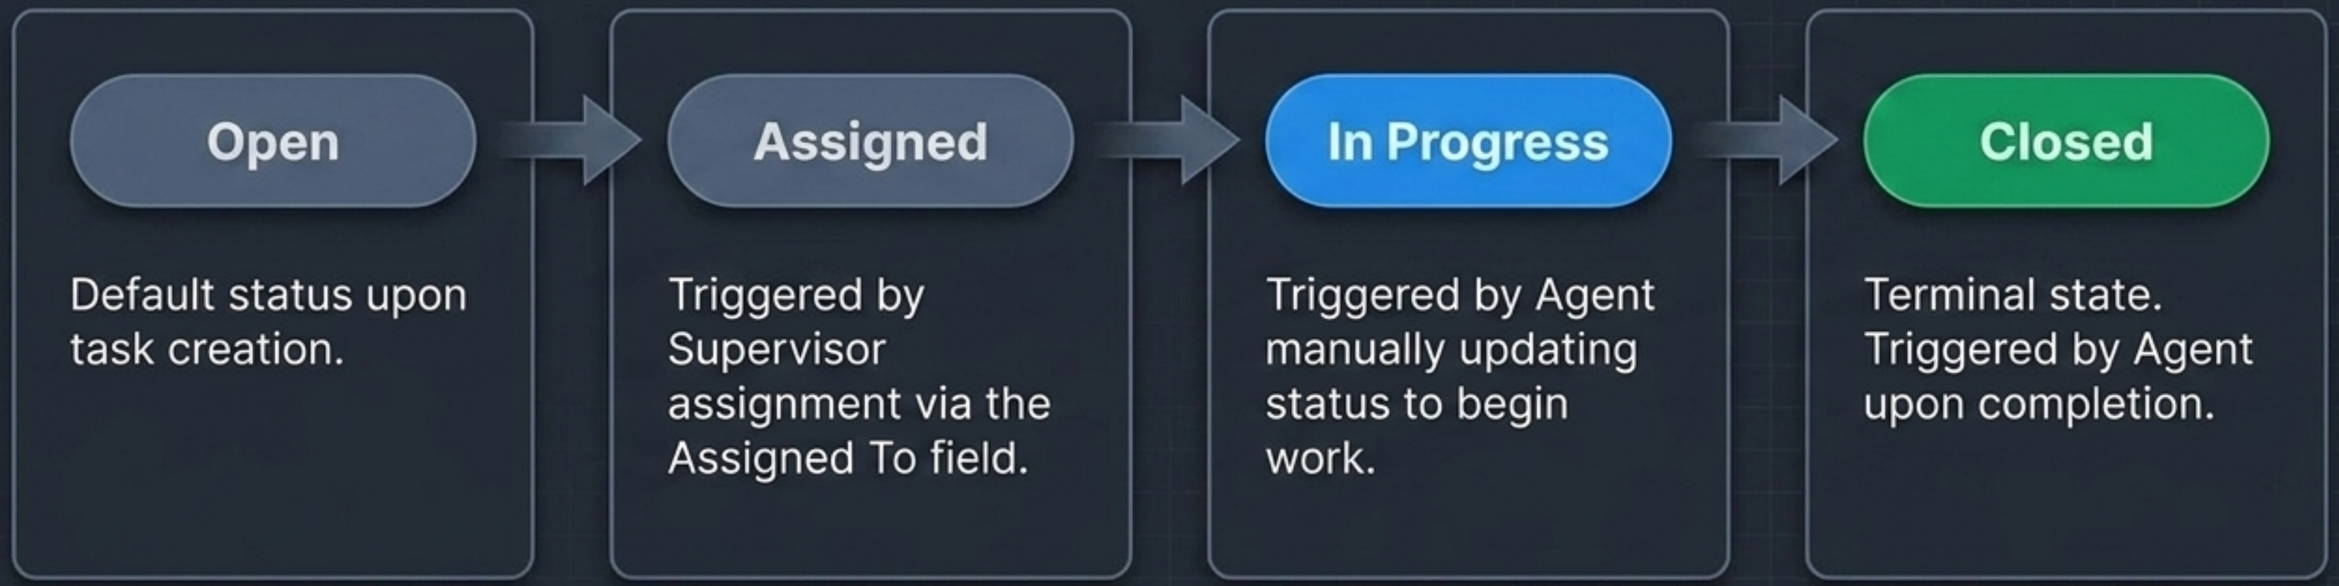

Governed by BR-05: Task Assignment Authority.
Only the responsible supervisor may assign or reassign tasks to team members.

Agent View

- Open Tasks
- In Progress Tasks
- Pending Payments
- Priority Tasks
- Draft Orders

Display limited strictly to tasks assigned to the logged-in agent. Responsible for navigating to details and updating permitted statuses.

The Task State-Machine

Note: System strictly enforces that status can only be updated through these permitted lifecycle transitions.

High-Stakes Workflow: The Approval Matrix

Capability: CAP-40 (Agent Approval View)

Mechanics

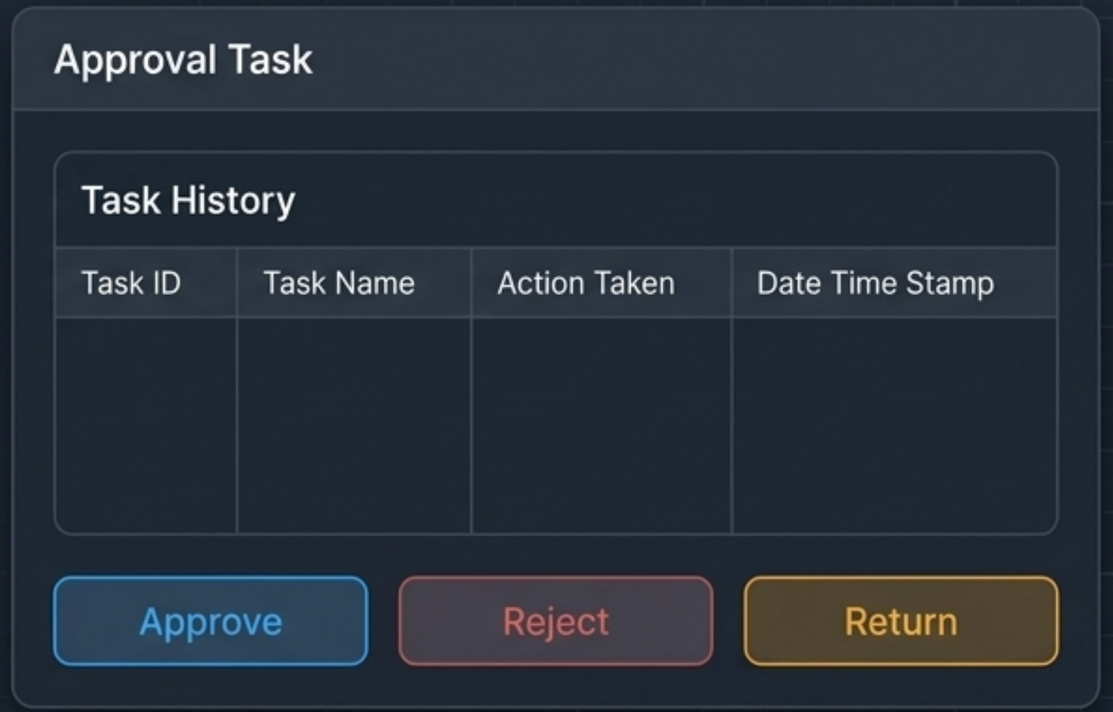

Task assignment strictly follows a configured approval matrix for each category. Access is denied if the task is not explicitly assigned to the logged-in agent.

Task History Requirements

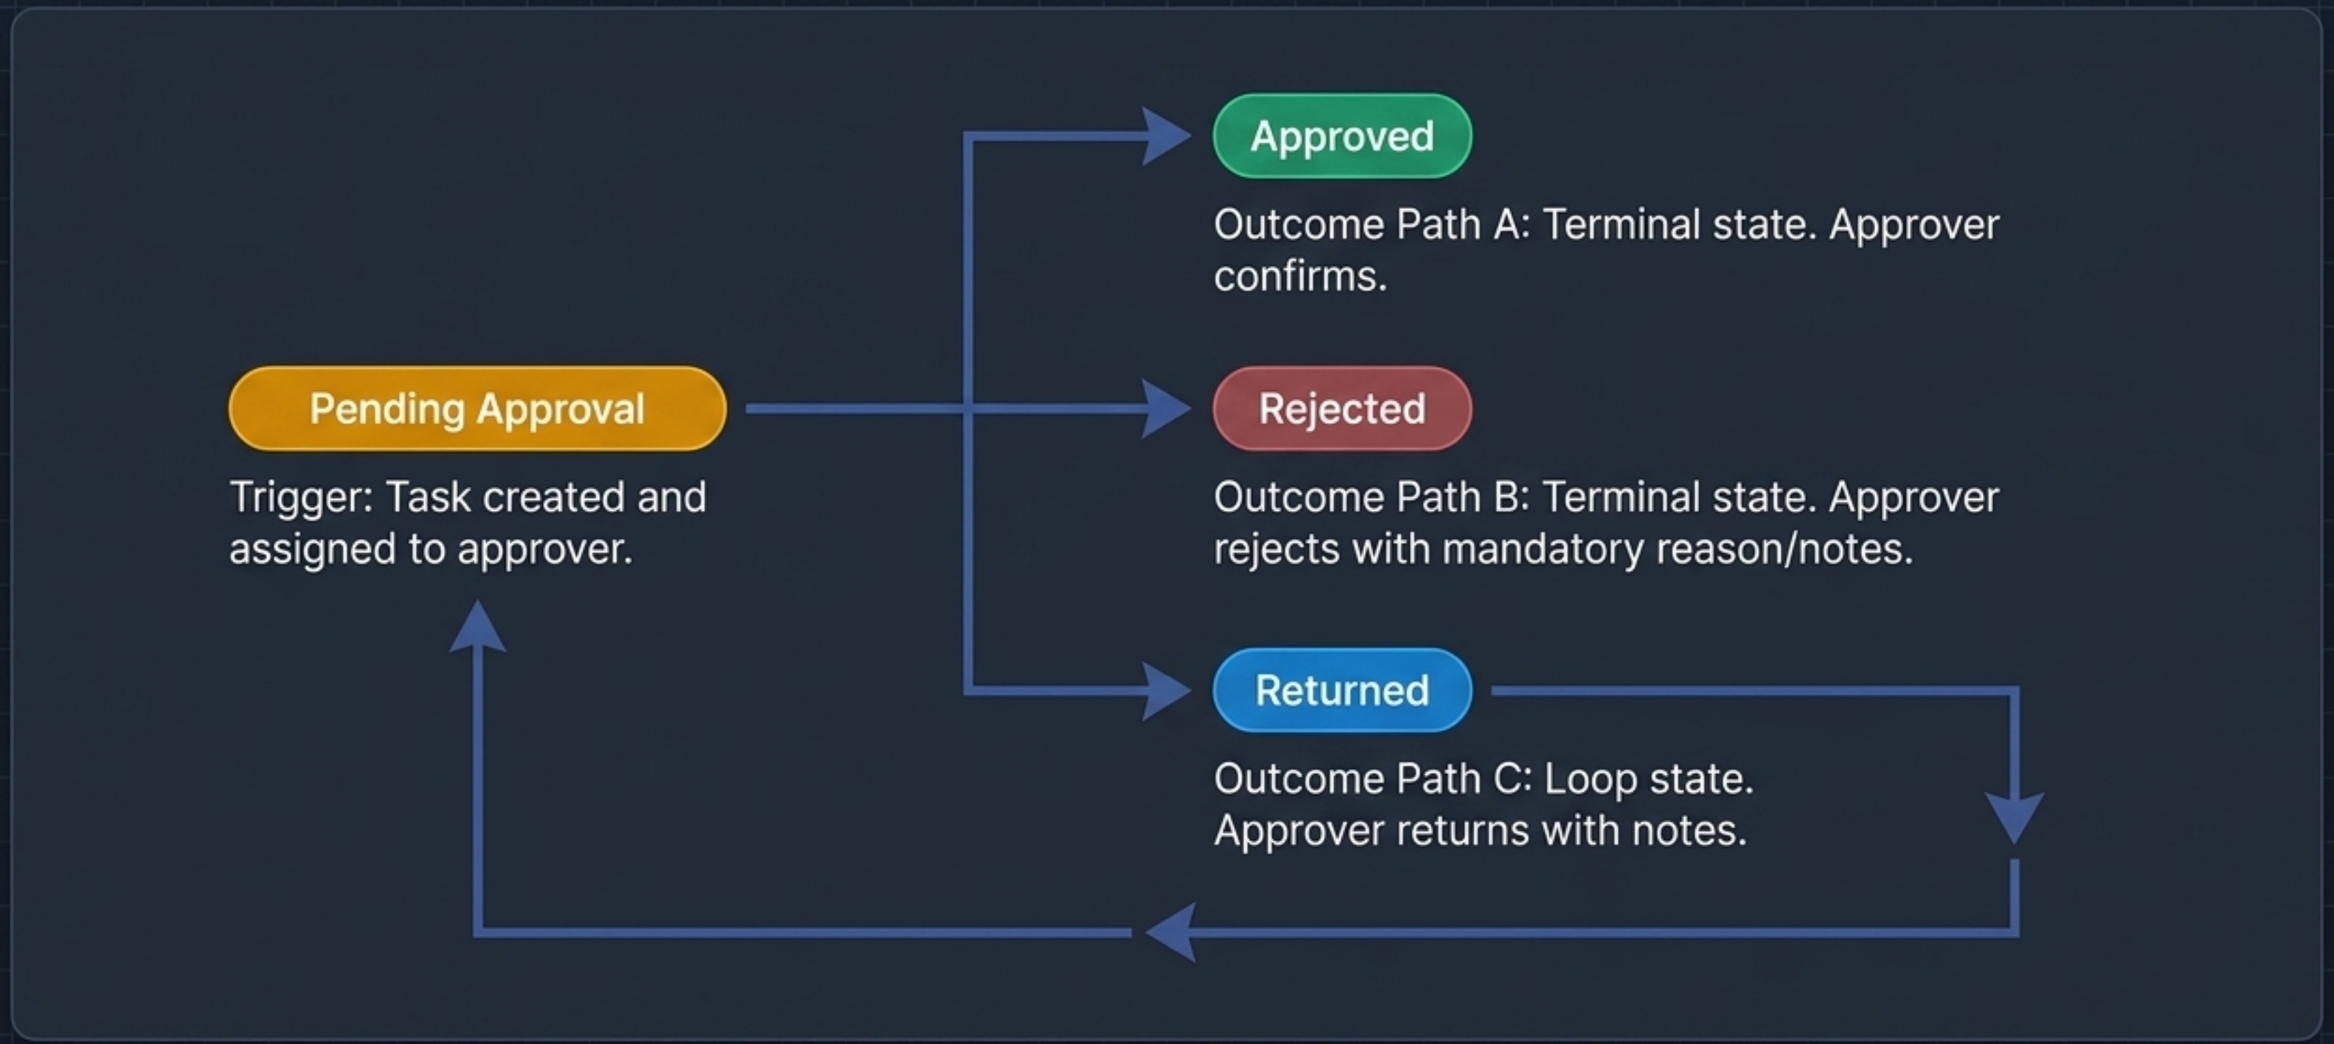

Before confirming any action, agents must review history containing Task ID, Task Name, Action Taken, and Date Time Stamp.

Guardrail BR-06: Approval Accountability.

Only the assigned approver may act. Rejections or returns mandate captured reasons and supporting notes.

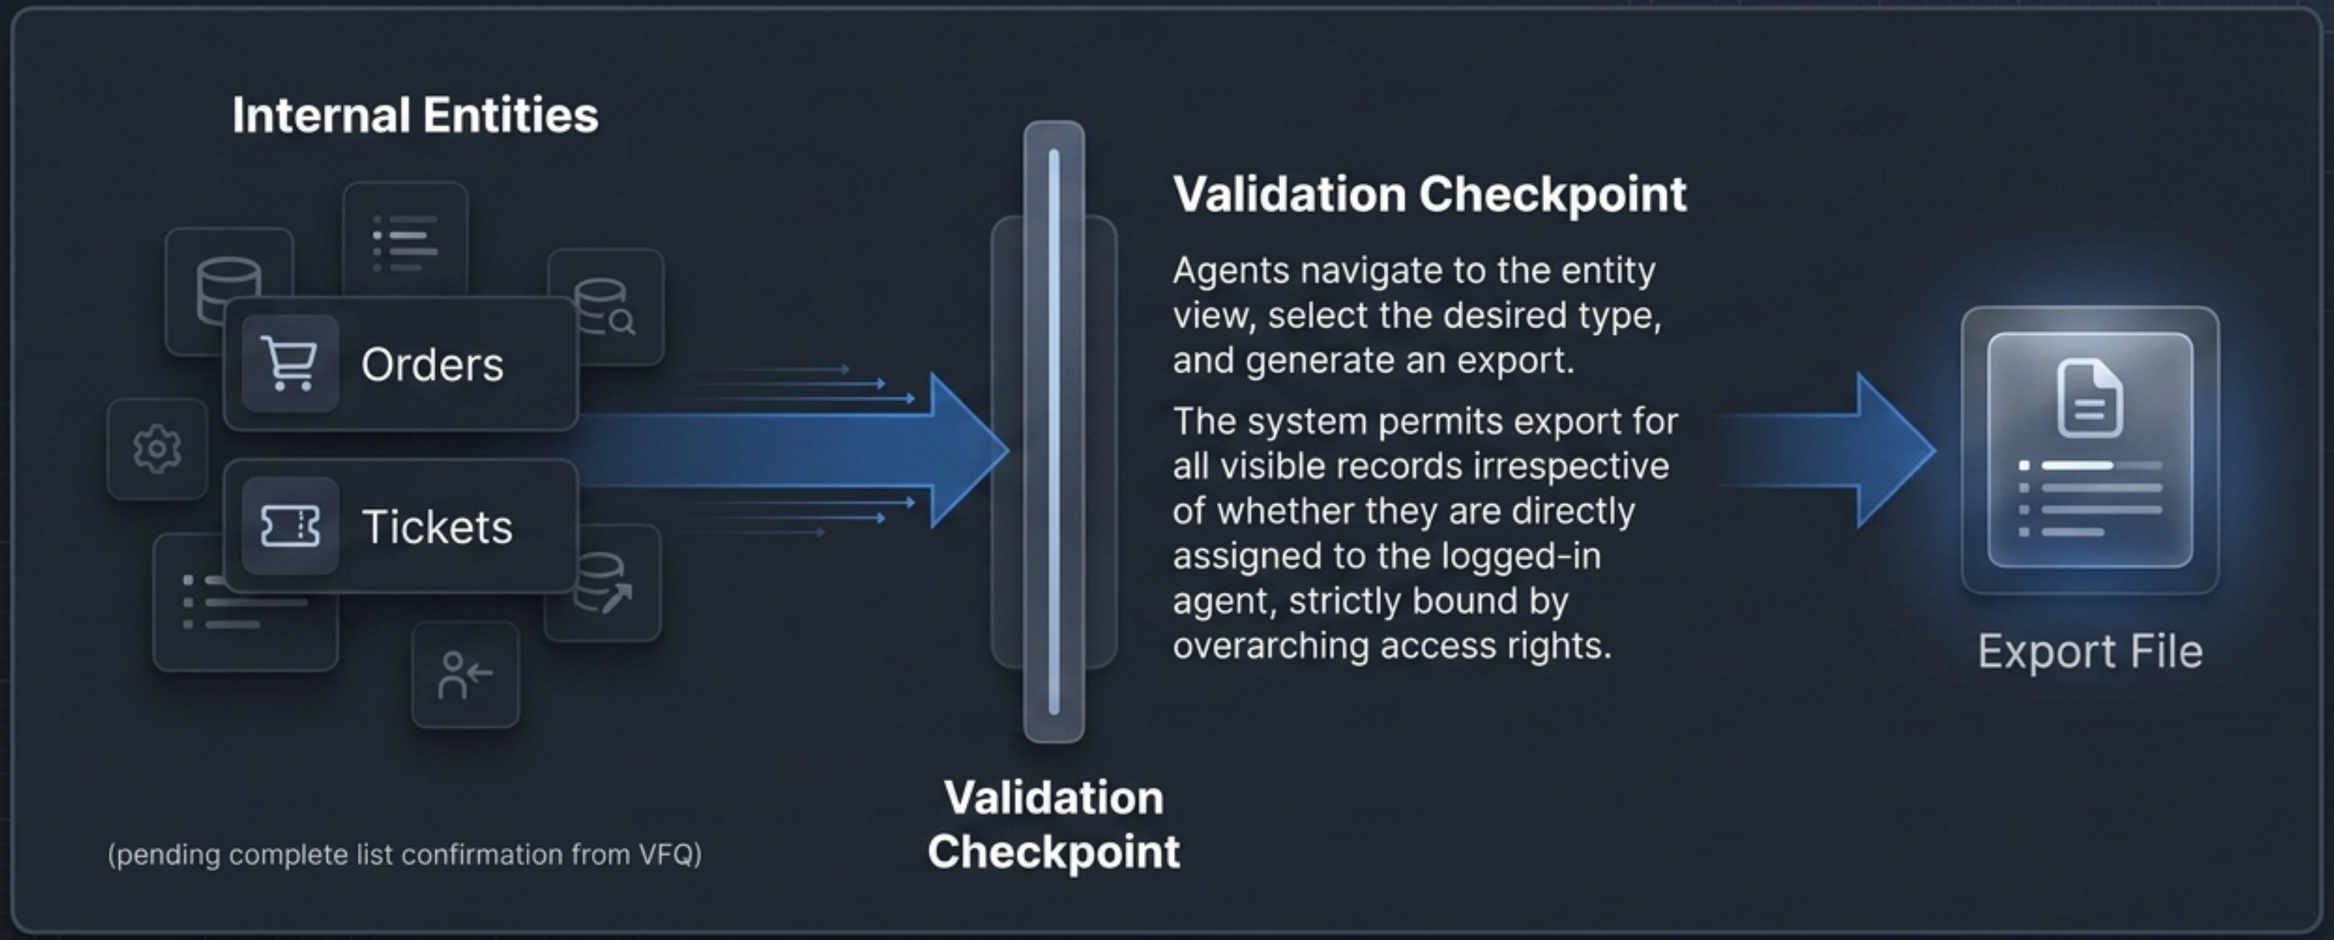

Approval Task Decision Architecture

Secure Entity Extraction

Capability: CAP-41 (Agent Level Entity Export)

Unified Governance Architecture

Identity Guardrails
(BR-01, BR-02)

VFQ Security and role matrices lock down Profile and MFA edits.

Communication Guardrails
(BR-03, BR-04)

Backoffice privileges and approved templates sanitize all customer-facing alerts (Bell & Bulk).

Execution Guardrails
(BR-05, BR-06)

Strict supervisory assignment and mandatory accountable decision-logging govern all operational output.

Synthesis: Every operational transition in Agent 360 is mathematically bound by specific state-machines and business rules.

Conclusion: The IT architecture is not just a UI; it is an enforcement engine for VFQ Business Requirements.
